

HAND-TIED

Caring for your bouquet

1. **Unwrap and recut every stem** — an inch, at a sharp angle. This matters more than anything else here.
2. **Clean vase, fresh water**, plus the flower food enclosed. A dirty vase is the commonest cause of a short life.
3. **Strip any leaf below the waterline**, and change the water every other day.
4. **Cool, out of the sun, away from ripening fruit.**
